IDEATION PHASE

BRAINSTORM, IDEA LISTING, GROUPING & PRIORITIZATION

SkillWallet — ServiceNow Project

Date	15 October 2026	**Team ID**	SkillWallet — ServiceNow Project
Project Name	Automated Employee Onboarding & Offboarding System	**Maximum Marks**	4 Marks

Purpose

Brainstorming creates an open environment where team members can contribute ideas, build on one another's suggestions, and explore creative solutions. This session focuses on reducing manual coordination across HR, IT, Facilities, and Security during employee onboarding and offboarding.

STEP 1: TEAM GATHERING, COLLABORATION AND SELECT THE PROBLEM STATEMENT

Before you collaborate

• **Team gathering:** HR, IT, Facilities, and Security perspectives are represented.

• **Set the goal:** Focus on the manual onboarding process and how it delays new hires.

• **Facilitation:** One team member leads the session while others contribute ideas freely.

Problem statement

> *"How might we automate the employee onboarding and offboarding process in ServiceNow to eliminate manual coordination between HR, IT, Facilities, and Security—reducing onboarding time from days to hours while maintaining secure role-based access and complete audit visibility?"*

Key rules of brainstorming

Stay on topic • Defer judgment • Go for volume • Encourage wild ideas • Listen to others • Use visuals where possible

STEP 2: BRAINSTORM, IDEA LISTING AND GROUPING

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label.

Idea Listing — 8 Team Members × 5 Ideas

Person 1 — HR Representative 1. Single form for all onboarding requests 2. Manager approval before tasks start 3. Track employee lifecycle in one table 4. Auto-notify HR when onboarding completes 5. Store joining date and department details	**Person 2 — IT Representative** 1. Auto-create IT task on approval 2. Email IT assignment group instantly 3. Provide a clear short description of what to do 4. Track hardware/software access needed 5. Allow an access-revocation list for offboarding
Person 3 — Facilities Representative 1. Auto-create Facilities task on approval 2. Include a workspace preparation checklist 3. Assign to Facilities – Workspace group 4. Show joining date for scheduling 5. Notify when workspace is ready	**Person 4 — Security Representative** 1. Auto-create Security task on approval 2. Include badge and building access needs 3. Show compliance requirements 4. Track access revocations during offboarding 5. Maintain an audit trail of every action
Person 5 — Process Designer 1. Use a single Flow Designer automation 2. Avoid Business Rules or Script Includes 3. Add conditional branches for approve/reject 4. Update status automatically 5. Handle rejected requests cleanly	**Person 6 — UX Designer** 1. Create a clean Service Portal form 2. Show dynamic fields based on Request Type 3. Mark mandatory fields clearly 4. Use a mobile-friendly layout 5. Enable self-service for requestors
Person 7 — Security / ACL Designer 1. Apply role-based ACLs to the lifecycle table 2. Map groups to departments 3. Ensure only the assigned team sees its tasks 4. Control read/write/create/delete permissions 5. Allow admin override only for administrators	**Person 8 — QA / Documentation** 1. Perform end-to-end testing with real requests 2. Capture screenshots of each step 3. Document flow execution 4. Test the rejection path 5. Verify notifications

Grouped Ideas (Clusters)

After all eight participants shared their sticky notes, similar ideas were clustered together and labeled:

Cluster	Label	Ideas Included
A	Intake & Form	Single catalog item, dynamic variables, UI policies, mandatory fields
B	Approval & Routing	Manager approval, conditional branches, automatic task creation
C	Task Automation	IT, Facilities, and Security tasks created and assigned automatically
D	Data & Tracking	Employee lifecycle table, status updates, RITM linkage
E	Security	ACLs, role-based access, groups and roles
F	Notifications	Approval, completion, and rejection emails
G	SLA & Reporting	Task SLAs, response-time tracking, dashboards
H	Testing & Documentation	End-to-end tests, screenshots, documentation

Cluster Summary

#	Cluster Label	# of Ideas	Description
A	Intake & Form	5	How requests are captured
B	Approval & Routing	5	How approvals flow
C	Task Automation	5	How tasks are created and assigned
D	Data & Tracking	5	How data is stored and tracked
E	Security	5	How access is controlled
F	Notifications	3	What messages are sent
G	SLA & Reporting	3	How performance is measured
H	Testing & Documentation	5	How the solution is verified

Total: 40+ ideas across 8 clusters.

Visual — Sticky Note Layout

The board below organizes the eight participants into four columns and two rows. Each note represents one idea contributed during brainstorming.

Person 1 — HR Representative	Person 2 — IT Representative	Person 3 — Facilities Representative	Person 4 — Security Representative
■ Single form	■ Auto IT task	■ Auto Facilities task	■ Auto Security task
■ Approval	■ Email IT group	■ Workspace checklist	■ Badge needs
■ Track table	■ Clear description	■ Assign group	■ Compliance
■ Auto-notify	■ Hardware list	■ Show joining date	■ Revocation
■ Store date	■ Revocation	■ Notify ready	■ Audit trail

Person 5 — Process Designer	Person 6 — UX Designer	Person 7 — Security / ACL Designer	Person 8 — QA / Documentation
■ Single flow	■ Clean portal	■ Role-based ACLs	■ E2E tests
■ No scripts	■ Dynamic fields	■ Group mapping	■ Screenshots
■ Approve/reject branches	■ Mandatory fields	■ Task visibility	■ Flow documentation
■ Auto status	■ Mobile layout	■ CRUD controls	■ Rejection tests
■ Clean rejection	■ Self-service	■ Admin override	■ Verify emails

STEP 3: IDEA PRIORITIZATION

Prioritization Table — Importance vs. Feasibility

Priority	Idea	Importance	Feasibility	Decision
1	Employee Onboarding catalog item	High	High	Do first
2	Custom u_employee_lifecycle table	High	High	Do first
3	Flow Designer automation (15 actions)	High	High	Do first
4	Manager approval routing	High	High	Do first
5	Automatic IT / Facilities / Security task creation	High	High	Do first
6	Role-based ACLs	High	High	Do first
7	Email notifications	High	High	Do first
8	UI policies (dynamic fields)	High	High	Quick win
9	SLA on IT task	High	Medium	Do later
10	Performance Analytics dashboards	Medium	Medium	Do later
11	Active Directory integration	High	Low	Do later
12	Virtual Agent chatbot	Low	Medium	Future scope / skip for now
13	Mobile optimization	Low	Medium	Future scope / skip for now

Prioritization Matrix (2×2)

Importance	Do Later	Do First
High	Do later: SLA on all three departments; dashboards; Active Directory integration; chatbot as a future enhancement.	Do first: Catalog item; lifecycle table; Flow Designer; manager approval; three auto-created tasks; ACLs; email notifications.
Low	Skip for now: mobile app, payroll integration, multi-language support.	Quick wins: UI policies, mandatory fields, Request Type choices, and status choices.

Summary

Aspect	Value
Problem statement	Automate onboarding/offboarding in ServiceNow
Ideas generated	40+ ideas
Clusters	8 clusters
Top priority	Catalog item, lifecycle table, Flow Designer, and ACLs
Quick wins	UI policies, mandatory fields, and choices
Future scope	Active Directory integration, dashboards, and Virtual Agent chatbot

Outcome

The brainstorming session identified 40+ ideas across eight clusters and prioritized seven core capabilities as must-build items: the catalog item, custom lifecycle table, Flow Designer automation, manager approval, automatic task creation, role-based ACLs, and notifications. These were selected as the target implementation scope. The current implementation should be assessed against the actual ServiceNow configuration before describing every capability as completed. Active Directory integration, Performance Analytics dashboards, and Virtual Agent chatbot remain future enhancements.
