PROPOSED SOLUTION

Project Design Phase • SkillWallet — ServiceNow Project

Date	15 October 2026	**Maximum Marks**	2 Marks
Team ID	SkillWallet — ServiceNow Project	**Project Name**	Automated Employee Onboarding & Offboarding System

Proposed Solution Template

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	**Problem Statement (Problem to be solved)**	Employee onboarding and offboarding at growing organizations is largely manual — HR coordinates with IT, Facilities, and Security via emails and spreadsheets, resulting in delays, missed tasks, inconsistent new-hire experiences, and no audit trail. There is no unified system to trigger, route, and track lifecycle tasks across departments, and new hires often wait days for accounts, hardware, workspace, and access.
2.	**Idea / Solution description**	The Automated Employee Onboarding & Offboarding System in ServiceNow provides a single self-service catalog item (13 variables) that captures all request data with mandatory field enforcement. On submission, Flow Designer automatically: (1) creates a record in a custom Employee Lifecycle table, (2) routes a manager approval with full context, (3) creates 3 parallel tasks for IT, Facilities, and Security with assigned groups, (4) waits for all tasks to close, (5) updates lifecycle status to Completed, (6) closes the RITM, and (7) sends notifications.
3.	**Novelty / Uniqueness**	• **100% low-code build** — no Business Rules, Script Includes, or Scheduled Jobs; entirely Flow Designer • **Dynamic manager-driven approvals** — approver is resolved from a catalog variable, not hardcoded • **Auto multi-department task creation** in one flow run • **Conditional branches** handle approve and reject paths cleanly • **UI policies** show/hide Joining/Exit Date based on Request Type • **Role-based ACLs** with 7 security rules on the custom table • **SLA tracking** per departmental task • **Complete audit trail** via flow execution logs and approval history
4.	**Social Impact / Customer Satisfaction**	• **For HR** — reduces 6–8 hours of manual coordination per hire to near zero • **For Managers** — one-click approval with full context, no back-and-forth • **For IT, Facilities, Security** — auto-assigned tasks with clear instructions, no chasing • **For New Hires** — faster, consistent first-day experience with accounts, hardware, and access ready on day 1 • **For the Organization** — improved compliance via audit trails, reduced paper, scalable as headcount grows • **Employee satisfaction** — measurable improvement in new-hire first-day NPS • **Sustainability** — 100% digital, no paper-based onboarding forms
5.	**Business Model (Revenue Model)**	• **Internal enterprise solution** — no direct revenue; benefits are measured as productivity gains and cost savings • **Indirect ROI** — HR time saved per hire (~6 hrs) × cost per hour × hires per year • **Compliance savings** — reduced risk of audit penalties via automated trails • **Repeatable template** — solution can be packaged as an Update Set and reused across business units • **Consulting potential** — as a showcase project, demonstrates ServiceNow expertise for freelance/consulting opportunities • **Cost of ownership** — zero additional software cost since built on existing ServiceNow platform

S.No.	Parameter	Description
6.	**Scalability of the Solution**	• **Horizontal scalability** — built on ServiceNow cloud (PaaS), auto-scaling infrastructure • **Volume handling** — supports 100+ onboarding/offboarding requests per month without performance degradation • **Extensible architecture** — same pattern (Catalog → Flow → Tasks → Lifecycle) can be replicated for: ■ Leave Requests ■ Transfer Requests ■ Promotion Workflows ■ Equipment Return ■ Exit Interviews • **Future integrations** — ready for Active Directory, Integration Hub spokes (Slack, Teams, SAP), and Predictive Intelligence • **Multi-department ready** — groups and roles can be extended without code changes • **Global-ready** — supports multi-language and multi-location via ServiceNow localization

Solution Summary

Aspect	Detail
Platform	ServiceNow (PaaS)
Approach	100% low-code (Flow Designer)
Core Components	Catalog item, custom table, 15-action flow, ACLs, SLA
Automation Level	End-to-end (submission → completion)
Manual Steps Removed	90%+
Time Saved per Hire	~6 hours
Audit Readiness	Full (flow logs + approval history)
Custom Scripts	0
Replication Time	~2.5 hours in a fresh PDI

Value Proposition

__For HR teams__ drowning in manual onboarding coordination, __our ServiceNow-based solution__ automates the entire lifecycle — from request submission to completion — through a single form, dynamic approvals, auto-assigned departmental tasks, and real-time status tracking. __Unlike__ spreadsheets, email chains, or disconnected HR tools, __our solution__ is built on the existing ServiceNow platform with zero custom code, full audit trail, role-based security, and the ability to scale to any volume.
