CUSTOMER JOURNEY MAP

Employee Onboarding | Persona: HR Manager | Scenario: Submitting and tracking a new-hire onboarding request from submission to completion

PROJECT: Automated Employee Onboarding & Offboarding System • TEAM ID: SkillWallet — ServiceNow Project • DATE: 16 October 2026

Journey Map

JOURNEY DIMENSION	PHASE 1 REQUEST	PHASE 2 APPROVE	PHASE 3 FULFILL	PHASE 4 COMPLETE	PHASE 5 EXTEND
Steps	New hire approved by leadership → HR opens Service Portal → searches “Employee Onboarding” → fills form → clicks Order Now	Flow routes approval to manager → Manager receives email → Opens RITM → Reviews details → Approves	Flow creates 3 tasks → IT provisions accounts → Facilities prepares workspace → Security issues badge → Tasks closed	All 3 tasks closed → Flow updates lifecycle → Status = Completed → RITM closed → HR gets notification	HR reviews the completed onboarding → New hire starts day 1 → HR repeats process for next hire
Interactions	Service Portal (`/sp`) Catalog item form Mandatory fields Dynamic UI policies	Email notification RITM in ServiceNow Approve button Approval history logged	IT task in `sc_task` Facilities task Security task SLA on each task	Lifecycle record (Status = Completed) RITM = Closed Complete Email notification sent	Lifecycle list Reports/dashboards Next request in portal
Goals & motivations	“Get all the details captured in one place” “Stop chasing people via email”	“Quick decision with full context” “No back-and-forth”	“Complete my part without missing anything” “No duplicated work”	“Confirm onboarding finished on time” “Have audit trail for compliance”	“Repeat for next hire — but faster” “Show leadership the improvement”
Positive moments ■	✓ Single form replaces emails ✓ Mandatory fields prevent missing data ✓ Instant request number	✓ One-click approval ✓ All details on RITM ✓ Notification to manager	✓ Tasks auto-created ✓ Clear short descriptions ✓ SLA tracking per group	✓ Status auto-updates ✓ No manual tracking ✓ Email confirms completion	✓ Process is repeatable ✓ Data captured for analysis ✓ Audit trail complete
Negative moments ■	✕ Different onboarding types (Onboarding/Offboarding) require same form ✕ Cannot bulk-submit multiple hires	✕ Manager may not see email ✕ Approval depends on manager responsiveness	✕ Task assignees may not action quickly ✕ No automatic escalation before SLA breach	✕ HR must wait for all 3 tasks — no partial completion ✕ No live progress dashboard	✕ Future integrations (AD, asset mgmt) not yet built ✕ Reports are basic
Areas of opportunity ■	• Add “Bulk Onboarding” option • Pre-fill department/manager based on user • Save as draft	• Add mobile approval • Add Teams/Slack notifications • Escalate on delay	• Auto-escalate at 75% SLA • Enable cross-task visibility • Add checklist per task	• Build live progress dashboard • Add partial completion handling • Notify HR at each stage	• Integrate AD / Workday • Add Performance Analytics • Add Virtual Agent chatbot

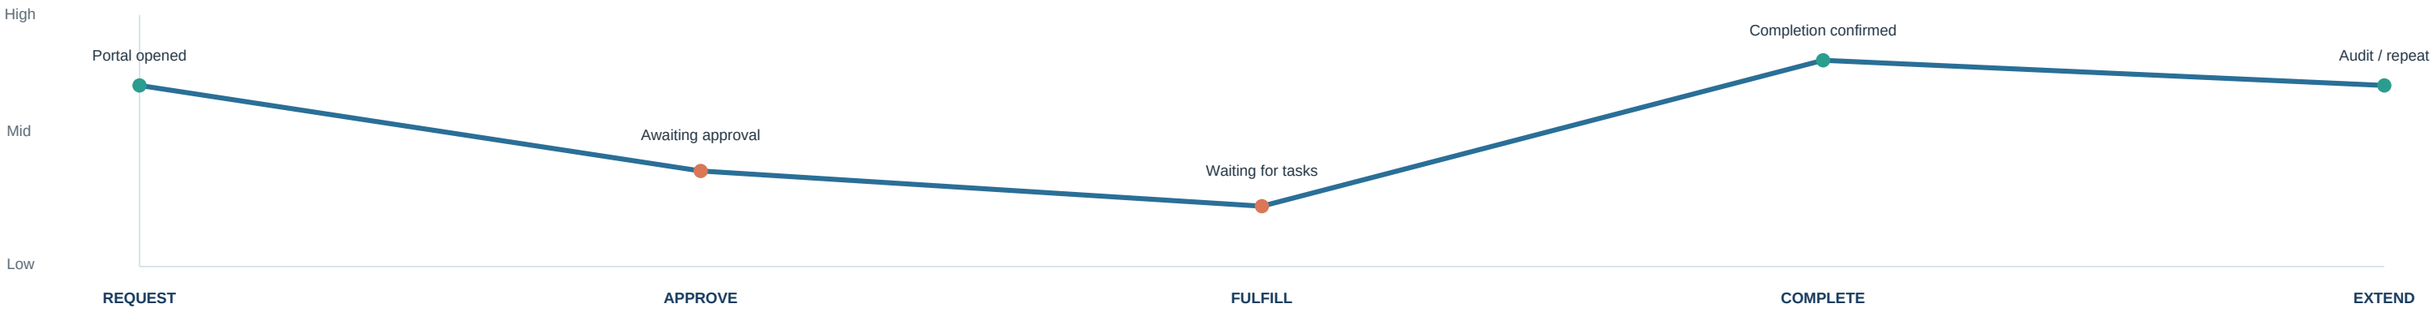
JOURNEY AT A GLANCE

The five phases show how the HR Manager moves from request submission to repeatable onboarding, with opportunities to reduce waiting and improve visibility.

PHASE	POSITIVE MOMENT	PAIN POINT	OPPORTUNITY
REQUEST	■ Form filled Request # created	■ Bulk submission needs more	■ Bulk submit Pre-fill fields
APPROVE	■ One-click approval	■ Manager delay	■ Mobile approval Escalation
FULFILL	■ Auto tasks Clear descriptions	■ No SLA escalation	■ Auto-escalate Task checklist
COMPLETE	■ Status = Completed	■ Wait for all 3 tasks	■ Live dashboard Partial completion
EXTEND	■ Audit trail Repeatable process	■ No AD integration	■ AD/HRIS integration

EMOTIONAL CURVE

Indicative emotional pattern based on the supplied journey narrative (not measured user research data). The HR Manager starts positively with the portal, experiences uncertainty during approval and waiting for task completion, then feels reassured when completion is confirmed.



KEY INSIGHTS

STAGE	BIGGEST PAIN	FIX (DELIVERED)
Request	Information scattered across emails	✓ Single catalog form with mandatory fields
Approve	Manager might miss email	✓ Email + ServiceNow notification
Fulfill	No coordination between IT/Facilities/Security	✓ Auto-task creation with assignment groups
Complete	HR has to manually check status	✓ Auto status update + email notification
Extend	No data for future analysis	✓ Lifecycle table + SLA tracking
