SOLUTION REQUIREMENTS

Functional & Non-Functional Requirements

Date	15 October 2026	**Team ID**	SkillWallet — ServiceNow Project
Project Name	Automated Employee Onboarding & Offboarding System	**Maximum Marks**	4 Marks

Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Employee Request Submission	• Submit request via Service Portal • Search catalog item “Employee Onboarding” • Choose Request Type (Onboarding / Offboarding) • Fill 13 catalog variables with mandatory field enforcement
FR-2	Catalog Variable Capture	• Auto-populate Requested For with current user • Capture Employee ID, Department, Manager • Capture Joining Date / Exit Date • Capture Assets needed and Access details
FR-3	Dynamic Form Behavior	• Show Joining Date when Request Type = Onboarding • Show Exit Date when Request Type = Offboarding • Enforce mandatory fields before submit • Apply UI policies for conditional visibility
FR-4	Lifecycle Record Creation	• Auto-create record in `u_employee_lifecycle` on submission • Map catalog variables to table fields • Set Request Type = Onboarding / Offboarding • Set Status = New
FR-5	Manager Approval Routing	• Trigger approval request to selected Manager • Send email notification to approver • Record approval/rejection with timestamp • Capture approval history
FR-6	Automatic Task Creation	• Create IT task on approval • Create Facilities task on approval • Create Security task on approval • Assign each task to its dedicated group
FR-7	Task Fulfillment Workflow	• Allow fulfillers to open and action tasks • Track task state (Open → Work in Progress → Closed Complete) • Capture work notes and completion timestamps • SLA tracking per task
FR-8	Status Update Automation	• Wait until all 3 tasks are Closed Complete • Update lifecycle Status = Completed • Update RITM State = Closed Complete • Handle rejection path (Status = Rejected)
FR-9	Notifications	• Notify manager on approval request • Notify requester on approval • Notify HR on completion • Send rejection email when applicable
FR-10	Role-Based Access Control	• Apply ACLs (read/write/create/delete) on lifecycle table • Restrict access to authorized roles • Map groups (HR, IT, Facilities, Security) to roles • Enforce least-privilege access
FR-11	Lifecycle Tracking & Reporting	• Track each request's status in lifecycle table • Provide RITM stage visibility • Provide SLA compliance data • Enable reports on request volume
FR-12	Audit & Compliance	• Log all approvals and actions • Retain flow execution history • Preserve approval history on RITM • Support compliance audits

Non-Functional Requirements

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Service Portal form must be intuitive with clear labels, mandatory field markers, and dynamic field behavior. Users should complete a request without training.
NFR-2	Security	Role-based ACLs must restrict data access on the `u_employee_lifecycle` table. Users may only view or modify records permitted by their role. Data confidentiality enforced.

NFR No.	Non-Functional Requirement	Description
NFR-3	Reliability	The Flow Designer automation must execute consistently without failures. Any errors must be logged in the Error Handler and recoverable. End-to-end flow must complete 100% of the time.
NFR-4	Performance	The flow must complete within seconds of trigger. SLA timers must fire accurately. Portal form load time under 3 seconds.
NFR-5	Availability	The solution is available 24×7 via the ServiceNow PDI platform. Downtime tied to ServiceNow's own availability SLA.
NFR-6	Scalability	The solution must handle concurrent onboarding requests without performance degradation. Flow must scale for 100+ employees per month. Design supports future AD integration and expanded HR services.
NFR-7	Maintainability	Built with Flow Designer and out-of-box features only (no custom scripts). Admin can modify the flow without developer involvement. Documentation provided for replication.
NFR-8	Auditability	Every approval, task creation, status update, and notification must be traceable via Flow Execution Details, Approval History, and Sys Email logs.

Summary

Type	Count
Functional Requirements	12 (FR-1 to FR-12)
Non-Functional Requirements	8 (NFR-1 to NFR-8)
